1. Plug the power supply into a wall outlet.
2. Plug the other end into the black port on the Router.
3. Find the cable connecting the modem and computer*. Unplug it from the computer and plug it into the yellow port on the Router.

*If you are replacing an existing router, find the cable connecting the modem and old router. Disconnect it from the old router and plug it into the yellow port on the new router.

4. Connect the new cable (provided in the box) to any gray port on the router.
5. Connect the other end of that cable to a networking (Ethernet) port on your computer.
6. Rotate the antennas up.
7. Open a web browser on that computer. The Belkin Router Setup Wizard should appear automatically. If it doesn’t, enter “routersetup” into the web-address field and press the “Enter” key.
